PROJECT DEMONSTRATION PLAN

Tableau Public dashboards • Global Fuel Prices and Taxation Analysis (2020–2026)

Student Name	Disha Patidar	**Enrollment ID**	en25ca3020057
Programme	Bachelor of Computer Applications (BCA)	**Year / Semester**	Second Year / 3rd Semester
College	MEDI-CAPS University	**Project Type**	Individual Project
Date	To be confirmed	**Duration**	Approx. 8 minutes

Purpose of the Demonstration

Demonstrate how the project uses a global fuel-price and taxation dataset to explore differences across countries and regions. The walkthrough introduces the dataset and Tableau workflow, then presents three scenario-based dashboards. This is a proposed demonstration sequence; it does not claim that a formal rehearsal or live demonstration has already occurred.

Project Demo Planning

No.	Section	What to demonstrate	Time
1	**Introduction & problem statement**	Introduce the project and why comparing fuel prices, taxes, and subsidies across countries can support policy and planning analysis.	1 min
2	**Solution overview**	Introduce the CSV dataset, Tableau Public workflow, three dashboards, and the project website that provides access to the published Tableau story.	1 min
3	**Scenario 1: Taxation & subsidy policy**	Show tax rankings, regional petrol-price comparisons, the tax-versus-price relationship, and subsidy-level comparisons.	1.5 min
4	**Scenario 2: Supply chain planning**	Show countries with higher/lower petrol prices, regional comparisons, and Brent crude/fuel-price trends; explain legends.	1.5 min
5	**Scenario 3: Economic development**	Compare fuel prices and taxation by income level; demonstrate available Income Level, Region, and Subsidy Level filters.	1.5 min
6	**Published workbook, limitations & Q&A;**	Open the published Tableau story, summarise observations, acknowledge limitations and possible extensions, then answer questions.	1.5 min

Suggested total: approximately 8 minutes. Timings are a planning estimate and can be adjusted to the presentation slot.

DEMO FLOW & DASHBOARD WALKTHROUGH

Use the sequence below to keep the live walkthrough focused and easy to follow.

Step	Activity	Presenter action / talking point
1	**Set the context**	State the project objective and introduce the three analytical questions: how taxation/subsidies differ, how price patterns may inform supply planning, and how prices compare across income levels.
2	**Explain the data and solution**	Describe the dataset as covering 84 countries across 7 regions from January 2020 to April 2026, with fields including fuel prices, tax percentage, subsidy level, income level, and Brent crude price. Explain that Tableau Public is used for visual analysis.
3	**Navigate the dashboards**	Open each dashboard in order. Point to chart titles, axes, legends, and available filters. Explain what each chart helps the viewer compare rather than simply reading values.
4	**Close and take questions**	Summarise the main comparisons, clarify that visual associations do not by themselves prove causation, and mention limitations/future extensions before Q&A.;

Dashboard Demonstration Checklist

Dashboard	Show these elements	Key explanation
1. Fuel Taxation & Subsidy Policy	Tax ranking; regional petrol prices; taxation versus fuel price; subsidy-level comparison.	Explain how tax and subsidy indicators vary across the countries represented. Treat patterns as comparisons, not proof of direct causation.
2. Global Fuel Prices & Supply Chain Planning	Higher/lower petrol-price countries; regional comparison; Brent crude and fuel-price trends; legends.	Show how country and regional differences may help frame supply-planning questions. Point out the period and units shown in each chart.
3. Fuel Prices, Taxation & Economic Development	Income-level comparison; Region, Income Level, and Subsidy Level filters where available.	Explain how the selected filters narrow the comparison and help examine differences among groups.

Project Links

Project website: https://global-fuel-prices-taxation-analysis.onrender.com/

Tableau Public Story: https://public.tableau.com/app/profile/disha.patidar7671/viz/GlobalFuelPricesandTaxationAnalysis2020-2026/STORY

GitHub repository: https://github.com/DishaPatidar11/global-fuel-prices-taxation-analysis

Before presenting: check internet access; open the website and Tableau story in advance; verify that all three dashboards load; test available filters; keep dashboard screenshots and the source CSV available as backups.

INDIVIDUAL CONTRIBUTION & PREPARATION

Team involvement template adapted for an individual project

Project and Participation Details

Field	Details
Project title	Global Fuel Prices and Taxation Analysis (2020–2026)
Project type	Individual project — no team members or team-coordination roles are applicable.
Presenter role	Presenter and project demonstrator.
Sections planned	Project overview; Scenario 1 — Fuel Taxation & Subsidy Policy; Scenario 2 — Global Fuel Prices & Supply Chain Planning; Scenario 3 — Fuel Prices, Taxation & Economic Development; published story, limitations, and Q&A.
Contribution summary	The project deliverables include the Tableau Public story with three scenario-based dashboards and supporting project website/documentation. The demonstration plan describes how these deliverables are intended to be presented.

Preparation Checklist

Check	Action
■	Confirm the website and Tableau Public story open on the presentation device.
■	Confirm all three dashboards are visible and charts/legends are readable.
■	Test filters where available and reset them before moving to the next dashboard.
■	Keep the dataset and screenshots available in case the internet or embedded dashboard fails.
■	Prepare a short explanation of the data fields, dashboard purpose, and limitations.

Limitations to State Clearly

• The dashboards support descriptive comparison of the available dataset; observed relationships should not be presented as proof that taxation or subsidies caused a particular price outcome.
• The displayed analysis depends on the dataset's country coverage, fields, and date range (January 2020–April 2026).
• The plan does not record a completed formal rehearsal, measured performance benchmark, or formal usability study. Do not claim these activities were completed unless evidence is available.

Possible Future Extensions

Potential extensions include adding more contextual variables, improving dashboard interaction and accessibility, documenting a repeatable data-refresh process, and conducting structured usability and performance tests. These are proposed improvements, not completed features.

Demonstration status: planned. Actual completion date, rehearsal outcomes, and issues encountered should be filled in only after the demonstration takes place.
